

# RwaCow — Quick Start Guide

A one-page guide to get the system running fast (for demos and presentations).

## Before You Start

Make sure these are installed:

- ✓ Node.js 18+
- ✓ XAMPP (with MySQL)

## Start in 4 Steps

### 1 Start MySQL

Open **XAMPP Control Panel** → click **Start** next to **MySQL** (wait for green).

### 2 Start the Backend

```
cd backend
npm run dev
```

✓ Wait for: `Server running on port 5000`

### 3 Start the Frontend

```
cd frontend
npm run dev
```

✓ Note the URL shown (usually `http://localhost:3000` or `3001` )

### 4 Open in Browser

Go to the URL from step 3.

## Login Accounts

| Role    | Email           | Password |
|---------|-----------------|----------|
| 👑 Admin | admin@rwacow.rw | admin123 |
| 🐾 Vet   | vet@rwacow.rw   | vet123   |

| Role                                                                                     | Email            | Password  |
|------------------------------------------------------------------------------------------|------------------|-----------|
|  Farmer | farmer@rwacow.rw | farmer123 |

---

## First-Time Setup (only once)

If the database is empty, run these once:

```
cd backend
npm run mysql:migrate    # create tables
npm run mysql:seed       # add test accounts
```

---

## If You See a Yellow "Demo Mode" Banner

That means the backend or MySQL is not running. Fix:

- Start MySQL in XAMPP
- Start the backend ( `npm run dev` )
- Refresh the browser

---

## Stopping Everything

- Press `Ctrl + C` in each terminal
- Stop MySQL in XAMPP Control Panel
